

## **ES-27 Remove Regulatory Barriers**

**Assessment: High Priority. Bin B. 18 out of 22 votes.**

In some instances, specific regulatory challenges have been identified within other policy options. General regulatory barriers include insufficient resources or staffing to addressing emerging issues (i.e., permitting related to GHG emissions, analysis of geological sequestration, or renewables capacity potential). Others include revisiting the traditional least-cost/least risk regulatory standard or mitigating added risks and financing challenges of advanced energy supply technologies with assured, timely cost-recovery.
